

Multi-Purpose Anemometer

This product is a portable multi-functional anemometer, and it is suitable for measuring temperature, humidity, wind chill, dew point, wind speed, barometric pressure, altitude and illumination.

Because the measurement of altitude is influenced by barometric pressure and temperature, so the altitude values measured in different seasons and different climates are different; but in the same day and condition that, barometric pressure and temperature slightly vary, the altitude reading is stable, so it can be used for measuring the altitude difference.
