What is TDS?

Total Dissolved Solids (TDS) are the total amount of mobile charged ions, including minerals, salts or metals dissolved in a given volume of water. TDS is expressed in parts per million (ppm) or milligrams per liter (mg/L). TDS includes any inorganic element present other than the pure water molecule (H_2O) and suspended solids. TDS meters are based on Electrical Conductivity (EC).

TDS affects everything that consumes, lives in, or uses water, whether organic or inorganic. While humans prefer low TDS in their drinking water, many species, such as plants and fish, need significantly higher levels. From drinking water to aquarium water or pipes to glass cleaners, it is always crucial to test for TDS or EC to ensure that the water is right for the application.

The U.S. EPA's Maximum Contaminant Level of TDS for human consumption is 500 ppm (mg/L).

*A available spring 2011

What is ORP?

ORP (Oxidation Reduction Potential), or Redox, is a measurement of water's ability to oxidize contaminants.

The higher the ORP, the greater the number of oxidizing agents.

Handhelds: Temperature and Salt

TM-1

- Industrial grade digital thermometer
- Heavy duty thermometer measures solids, liquids or gases
- Long probe with extended cable
- Includes convenient wallet-style carrying case

SB-1000 (High Range Salt Meter)

- Salt meter with measuring spoon (percentage of salt)
- Ideal for pools, saltwater aquariums and food preparation
- Extra wide range
- Large LCD display - horizontal angle for easy viewing
- Waterproof housing
- Automatic Temperature Compensation

RANGE		0.0 - 10%; 0.0 - 100 ppt
TEMP. RANGE	-50 to 250°C (-58 to 482°F)	1 to 99°C (33 to 211°F)
RESOLUTION	0.1°C/F	0.1%; 0.1 ppt; Temperature resolution is 0.1°C/F
ACCURACY	± 1°C (-10 to 100°C), ± 2°C (101 to 200°C), ± 3°C (-50 to -10°C), ± 5°C (200 to 250°C)	+/- 0.1%; Temperature accuracy is +/- 1°C
CALIBRATION	Analog	Digital calibration by push button
ELECTRODE	6.35 cm (2-1/2") stainless steel probe with 50.8 cm (20") cable	Platinum electrodes in measuring spoon
HOUSING	Splashproof, enclosed in wallet-style case	Waterproof (submersible; floats)
POWER SOURCE	2 x 1.5V button cell batteries (included)	3 x 1.5V button cell batteries (included)
DIMENSIONS	5.4 x 10.8 x 1.2 cm (2.1 x 4.2 x .5 in)	18.5 x 3.4 x 3.4 cm (7.3 x 1.3 x 1.3 in)
WEIGHT	85.4 g (3 oz)	82.2 g (2.9 oz)

Tips For Better Water Testing

- Always consult the instruction manual prior to use.
- Always be sure an instrument is properly calibrated. ORP and pH meters need to be calibrated frequently. TDS and EC meters will retain their calibration longer.
- HM Digital meters are factory calibrated as a convenience for the customer. Recalibration may be required.
- Never touch a sensor pin, electrode or reference cell. Skin oils will affect readings.
- Always lightly swirl a meter in the water to dislodge any trapped air bubbles.
- There are many factors that affect water testing, such as water pressure and static electricity. Minor fluctuations or discrepancies in readings are normal.
- Never store an instrument in high heat or humidity.

 <ul style="list-style-type: none"> • NaCl calibration solution • Available in 342 ppm or 1000 ppm • Comes in lightweight HDPE plastic bottles 3oz. (88.7 mL) • Sealed with a coated foam liner <div> Solution Equivalents <p>342 NaCl = 362 as KCl; 478 as "442"; 700 μs</p> <p>1000 NaCl = 1060 as KCl; 1450 as "442"; 2000 μs</p> </div>	 <ul style="list-style-type: none"> • Variety pack of pH buffer solution. • Powder has an indefinite shelf life. • Make only what you need, when you need it. <div> SPECIFICATIONS <ul style="list-style-type: none"> • Total volume: 1.2 liters (100 ml per packet) • Contents: 3 packets of 4.0 pH, 6 packets of 7.0 pH, 3 packets of 10.01 pH • Includes 1 empty 100 ml bottle • Accuracy: +/- 0.02 pH at 25° C </div>	 <ul style="list-style-type: none"> • Variety pack of ORP buffer solution. • Includes test kit to check the quality of your ORP electrode • Simple to use. <div> SPECIFICATIONS <ul style="list-style-type: none"> • Total volume: 1.0 liters. (100 ml per packet) • Contents: 5 packets of +92mV, 5 packets of +265 mV • Includes 3 x 100 ml bottles • Accuracy: +/- 0.2 ORP at 25° C </div>

What is pH?

pH (potential of hydrogen) is an indication of a substance's acid or alkaline properties.

The higher the pH, the more base it is, and the lower the pH, the more acidic it is.
A pH level of 7.0 is neutral.

About Calibration

A scientific instrument must be calibrated to achieve accurate testing results.

All HM Digital meters come factory calibrated and are ready to use out of the box in most instances. They are designed to stay consistent and retain their calibration. However, factory calibration is done as a convenience for the user, and there will be times when it is necessary to recalibrate a meter. A pH or ORP meter should be calibrated regularly, while a TDS or EC meter will retain its calibration for a considerably longer time. Additionally, calibration changes may occur during shipping or as a result of improper care. Always consult the instructions for a specific meter regarding calibration. The only way to determine if a meter has been calibrated properly is to check it against a laboratory-certified calibration solution or buffer.

HM Digital products are calibrated to specific points for the most common usages, depending upon the product. While factory calibration is suitable for most applications, there are many applications for which recalibration will be necessary to achieve improved accuracy. A meter should always be calibrated as close as possible to the level that will be tested. If testing a range with a single meter (such as RO water and tap water), the meter should be calibrated in the upper third of that range.

If calibrating a TDS meter, always ensure the EC-to-TDS conversion factor of the meter matches the calibration solution type.

HM Digital, Inc. is your premier source for the finest quality water testing instrumentation. From our facilities in Los Angeles, Seoul and Qingdao, HM Digital ships to anywhere in the world.

Our handheld meters, in-line monitors, controllers, sensors and calibration solutions, used in a myriad of applications, are superior in quality, features and performance, yet made available at a very economic cost. HM Digital takes pride not only in the quality of our products, but also in our commitment to customer service and the shortest lead times in the industry.

With HM Digital water testing instruments, you're on your way to the perfect water.

Testing Instruments for Professional and Personal Use
